Disinfection and Sterilization solutions

Optimal process plan, Best construction scheme,
Reasonable equipment configuration

Autoclaves provide a physical method for disinfection and sterilization. They work with a combination of steam, pressure and time. Autoclaves operate at high temperature and pressure in order to kill microorganisms and spores. Pharmaceutical, diagnostic and biomedical products in compliance with the CGMP regulations can rely on increasingly high-performance technologies and sterilization systems through the latest generation of Biobase® autoclaves.

They are used to **decontaminate certain biological waste and sterilize media, instruments and lab ware**. Regulated medical waste that might contain bacteria, viruses and other biological material are recommended to be inactivated by autoclaving before disposal.

Incubator and Oven

Modular or standalone system for incubation and heating of your samples

Biobase® Ovens & Incubators are **suitable a wide range of fields such as cytology, genetics, immunology, virus research and genetic engineering research**. Are ideal for cultivation cell, tissue and bacteria in scientific units and industrial production departments such as biomedic medicine, biotechnologies, pharmaceutical industry, biochemistry and agricultural science.

BIOBASE®

BIOBASE® is a new **high-tech enterprise whose business covers bio-medical, e-commerce, intelligent manufacturing, scientific equipment, In Vitro Diagnosis (IVD) instrument and reagent.**

With more than 5,000 employees, 31 workshops, covering a total area of 932,900 m². We have established overseas companies in USA, Dubai, India, Algeria, Singapore, Myanmar and other countries.

BIOBASE® is **specialized in medical equipment and laboratory equipment products**, with more than 200 existing high-tech products.

Since 2021 we are located in Italy through our business dealer authorized Neotec CBS S.r.l., increasingly close to the needs of our global customers.
